

Alu tape included!

insulParq

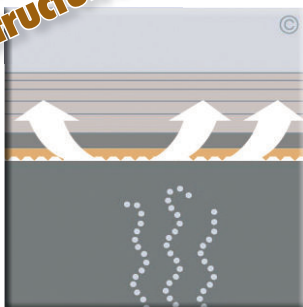

Parquet flooring underlay
Reduces impact noise

ΔL_w 21 dB!

21 dB

Pyramid shaped
Structure

Ventilation

Stops humidity

inert
Clean

Application

Under parquet flooring

Characteristics

Acoustic insulation : ΔL_w 21dB

Value λ : 0,034 W/mK

Materials : closed-cell polyolefine foam

Pyramid shaped structure

Thickness : \pm 3 mm

Standard size : 25 m x 1 m rolls

Colour : café late

Aluminium tape supplied : 25 m x 5 cm

Advantages

Reduces impact noise

Thermal and acoustic insulation

Easy and quick to lay

Pyramid-shaped structure

= resilience and ventilation

Durable, will not tear on laying

Protects the flooring against humidity

Alu tape provided

= completely impenetrable

insulParq

High performance parquet flooring underlay Significantly reduces impact noises

Description

InsulParq is a thin underlay for both flexible and inflexible parquet flooring. It uses pyramid technology in order to reduce impact noise to the greatest possible extent. This technique achieves not only resilience but also good ventilation beneath the parquet flooring. InsulParq forms a genuine barrier against humidity and thus effectively protects your parquet flooring.

Installation instructions

Laying the roll : The floor should be smooth and carefully brushed. Unroll InsulParq from one side of the room to the other, leaving a surplus at each end running slightly up each wall. Apply the supplied aluminium tape to the joints. Lay the parquet flooring and, only after this has been done, trim the surplus InsulParq. Attach the skirting board to the wall, slightly higher than the flexible flooring, so that the two do not touch. Seal the gap between the skirting board and the flooring with a silicone sealant.

1. Unroll InsulParq wall to wall, leaving a surplus running up each wall

Advantage: the aluminium tape included with each roll of InsulParq makes the underlay completely impenetrable and thus protects the parquet flooring from humidity

2. Apply the aluminium tape to the joints

3. Place the parquet flooring, leaving the surplus underlay

4. Trim the surplus InsulParq

5. Attach the skirting board a few millimetres above the parquet flooring, then fill the gap with sealant
